Our Roundtree Way depot is going fully electric and will use renewable electricity to charge each bus overnight.

The powerful batteries - up to six times more powerful than those in a standard electric car - allow a bus to keep going all day.

Each bus produces zero emissions at the tail pipe, meaning cleaner air for Norwich. The CO₂ savings, at least 75 tonnes* per bus per year, will also help in the battle against climate change.

Our electric buses are smooth and so quiet that at low speed a sound is made, warning of their presence.

* based on 70,000km per bus and the WTW GHG emissions savings stated in the official ZEMO Zero Emission Bus Certification

Next stop displays and announcements help everyone know where they're going.

There's a dedicated space for a wheelchair user as well as another flexible space.

Stay charged up on the go with our free USB charging ports.
